SUMMARY

Third-year BS Cyber Security student at FAST NUCES (class of 2028), focused on Security Engineering, SOC/DFIR, and Detection Engineering, with three internships and work in Wazuh, ELK, Splunk, pfSense, and API security. Built a threat intelligence pipeline for a 15-microservice DNS security platform and automated SIEM alerts. Seeking Security Engineering, SOC/DFIR, or Detection Engineering internships.

EXPERIENCE

Jul 2026 - Sep 2026
Remote

NetraLink Solutions, Security Engineering Intern

- Architected the threat intelligence pipeline for DeWall, a 15-microservice DNS security platform, ingesting 5 feeds (Abuse.ch, PhishTank, URLhaus, AlienVault OTX, Spamhaus) in real time; designed DGA and Newly Registered Domain detection logic to block C2 and phishing infrastructure, and built foundational DNSSEC/RPZ architecture for secure DNS resolution.
- Found a critical header-spoofing flaw in the API Gateway during a security architecture review; fixed it with strict JWT validation and server-side extraction of X-User-Id, closing an authentication bypass.
- Standardized authentication across Go microservices by moving 7+ critical endpoints to JWT middleware, and hardened CI/CD by repairing GitHub Actions security workflows and gosec SAST configurations to block vulnerable code merges.

Jul 2026 - Aug 2026
Remote

ITSOLERA, SOC Team Intern

- SIEM & Detection: Deployed a Wazuh SIEM and ELK Stack across Windows and Linux endpoints, ingesting Sysmon, Windows Defender, and File Integrity Monitoring telemetry and authoring custom XML/YARA detection rules.
- Threat Intel & Automation: Built a Python tool to extract and enrich IOCs via the VirusTotal and AbuseIPDB APIs plus custom CDB threat-intel lists, cutting manual lookup time by 90%+; automated the detection-to-notification pipeline by connecting Wazuh to n8n for real-time incident email alerts.
- DFIR & Network Security: Deployed pfSense with network segmentation and Syslog forwarding to Wazuh, and investigated a live Lumma Stealer infection via Wireshark PCAP analysis, extracting C2 infrastructure and producing a NIST-aligned five-phase incident response plan.

May 2026 - Aug 2026
Islamabad

Intellemia, Business Development Executive (Technical & Client-Facing)

- Ran B2B sales for enterprise AI solutions, wrote technical proposals, and built a 14-architecture playbook.

Mar 2026
Remote

Tech Hierarchy, SOC Analyst Intern

- Triaged 30+ daily alerts in Wazuh/Splunk against MITRE ATT&CK; independently deployed a personal SOC lab (Wazuh + ELK) simulating lateral movement, privilege escalation, and credential dumping.

Feb 2026 - Aug 2026
FAST NUCES

NASCON 2026 Forensics Arena & RDX National CTF, Challenge Author

- Designed "Silent Harvest," a memory forensics challenge (MITRE T1003.001, Volatility 3, NTLM hash extraction), plus 6 more RDX challenges (100+ participants combined).

EDUCATION

Aug 2024 - Jun 2028
(Expected)

FAST National University of Computer and Emerging Sciences, BS Cyber Security

- Current coursework: Information Security, Operating Systems, Artificial Intelligence, Database Systems. Completed: Software Engineering, Cybersecurity-I, Computer Networks.
- Cyber Space Legion (University Cybersecurity Society): Head of Operations (Sept 2026-Present), Head of Finance (Sept 2025-Aug 2026), and Technical Team Member (Sept 2024-Present).

PROJECTS

Multi-Area Network Design & Implementation | Cisco Packet Tracer, OSPF, EIGRP, RIPv2

Built a 19-router network with 11 VLSM-addressed LANs across four routing domains (OSPF Area 1, EIGRP AS 5, OSPF Area 2, RIPv2) with mutual redistribution at 3 border routers; configured centralized DHCP with relay agents, static NAT, DNS/mail/web services, and extended ACLs.

PIMS - POS Inventory Management System | Next.js, Supabase, TypeScript

Implemented defense-in-depth RBAC across the UI, middleware, and server actions, backed by PostgreSQL Row Level Security for tenant isolation; hardened sessions and inputs with server-side controls, Zod validation, secure cookies, SSRF protections, and audit logging.

NextGen Residency - Smart Housing Platform | MongoDB, Express.js, React

Hardened backend API with Helmet.js headers, CSRF protection, and NoSQL injection defenses; added TOTP 2FA and JWT refresh tokens.

CERTIFICATIONS & ACHIEVEMENTS

Certified Defensive Security Analyst (CDSA) - HTB (In Progress)
Network Security - Cisco
Advanced Digital Forensics Techniques - Belkasoft

Security Operations Center (SOC) - Cisco
ISO/IEC 27001:2022 Information Security Associate - SkillFront
Windows Forensics - Belkasoft

- 3rd Place, SudoFuzzers CTF 2025 (top 6% of 50+ teams) | 7th Place, CyberFest 2025 National CTF (top 7% of 100+ teams)
- Star of CyberFest '25: individual recognition award for outstanding performance and team coordination

SKILLS

Network Security: pfSense, Network Segmentation, Syslog, Wireshark, PCAP Analysis, DNSSEC/RPZ, NAT, ACLs

SOC & DFIR: Alert Triage, Incident Response (NIST), Threat Hunting, Malware Analysis, Windows/Memory Forensics, OSINT, MITRE ATT&CK

SIEM & Detection Engineering: Wazuh, Splunk, ELK Stack, Sysmon, FIM, XML/YARA Rules

Threat Intel & Automation: VirusTotal API, AbuseIPDB API, IOC Extraction, CDB Lists, n8n (SOAR)

AppSec & DevSecOps: JWT Middleware, API Gateway Hardening, RBAC, IAM, Secrets Management, GitHub Actions, gosec (SAST)

Programming & OS: Python, C++ (OOP, Data Structures), Go, TypeScript/JavaScript, x86 Assembly (MASM), PowerShell, SQL, MongoDB, Linux
