

USMAN IBRAHIM

SOC Analyst | Cybersecurity Student

0334-2226620 | i242038@isb.nu.edu.pk | [linkedin.com/in/usman-ibrahim](https://www.linkedin.com/in/usman-ibrahim) | github.com/UsmanPrime | usmanprime-portfolio.vercel.app

PROFESSIONAL SUMMARY

Cybersecurity student specializing in SOC operations, Digital Forensics and Incident Response (DFIR), and threat detection. Hands-on experience triaging 30+ daily security alerts and conducting real-time security monitoring using industry-standard SIEM platforms including Splunk, Wazuh, and Elastic Stack. Proficient in log analysis, endpoint telemetry, IOC identification, and MITRE ATT&CK-mapped threat hunting. Seeking a SOC Analyst Internship to apply blue-team expertise in a professional security operations environment.

EXPERIENCE

Business Development Intern

Intellega | May 2026 - Present

- Collaborated with a cross-functional team of 8+ professionals to identify opportunities for advanced AI solutions including RAG, LLM, Deep Learning, Generative AI, and Voice AI.
- Contributed to proposal preparation and AI-driven project initiatives, demonstrating understanding of enterprise AI integration approaches and best practices across industries.

SOC Analyst Intern

Tech Hierarchy | March 2026 - March 2026

- Triageed and investigated 30+ daily security alerts in Wazuh and Splunk, correlating events against MITRE ATT&CK TTPs to classify IOCs, reduce false-positive rates by 20%, and escalate confirmed incidents per established SOC runbooks.
- Conducted in-depth analysis of 500+ endpoint telemetry records, machine behavior patterns, and network logs per week to detect indicators of compromise (IOCs); documented findings in structured incident reports for Tier 2 analyst handoff, improving mean incident documentation quality by 30%.
- Constructed a personal SOC lab environment using Wazuh and ELK Stack to simulate 5+ attack scenarios (lateral movement, privilege escalation, and credential dumping), then refined detection rules, cutting mean-time-to-detect (MTTD) by 30% in lab tests.

Challenge Author - NASCON 2026 Forensics Arena

FAST NUCES Islamabad | February 2026 - Present

- Authored a hard-category memory forensics challenge simulating a fileless credential dumping attack (MITRE T1003.001); required participants to analyse a Windows memory image with Volatility 3 to identify process injection, extract NTLM hashes, and recover plaintext credentials - completed by fewer than 10% of competitors.

Challenge Author and Organizer - RDX National CTF

June 2025 - July 2025

- Authored and deployed 6 challenges covering log analysis, network traffic analysis, suspicious artifact investigation, and file-embedded forensics for a national-level cybersecurity competition; challenges assessed blue-team and DFIR skills for 100+ participants under time-constrained conditions.

EDUCATION

Bachelor of Science in Cyber Security

FAST National University of Computer and Emerging Sciences, Islamabad | August 2024 - June 2028

- Relevant Coursework: Software Engineering, Cybersecurity-I, Computer Networks

Cyber Space Legion | University Cybersecurity Society

- Technical Team Member: CTF participation, forensics challenge authoring, and blue-team skills workshops for junior members.
- Head of Finance (2025 - Present): Led finance team for flagship events, managed sponsor relations, and oversaw budgeting and financial reporting.

TECHNICAL SKILLS

Security Operations: SOC Operations, Alert Triage, Incident Response, DFIR, Threat Hunting, IOC Analysis, Vulnerability Assessment, Playbook Execution, SOC Tier 1 / Tier 2

SIEM and Security Tools: Splunk, Wazuh, Elastic Stack (ELK), Wireshark, Volatility 3, Autopsy, Belkasoft, Linux, Docker, Git

Digital Forensics: Memory Forensics, Windows Forensics, Network Traffic Analysis (PCAP), Log Analysis, File-Embedded Forensics, Endpoint Telemetry, OSINT

Frameworks and Standards: MITRE ATT&CK, ISO/IEC 27001, NIST Cybersecurity Framework

Programming Languages: Python, Bash, C++, JavaScript, TypeScript

Core Concepts: TCP/IP, Network Protocols, Data Structures, OOP, Secure Coding

Web and Dev Tools: React, Node.js, MongoDB, Tailwind CSS, Vercel, GitHub

CERTIFICATIONS

- Certified Defensive Security Analyst (CDSA) | Hack The Box (In Progress)
- Security Operations Center (SOC) | Cisco
- Network Security | Cisco
- ISO/IEC 27001:2022 Information Security Associate | Skill Front
- Computer Networks and Network Security | IBM
- Advanced Digital Forensics Techniques | Training Course
- Windows Forensics with Belkasoft | Belkasoft (6 CPE Credits)

PROJECTS

Smart Housing Society Portal | *React, Node.js, MongoDB* | 2025

- Engineered role-based portals for 3 user classes with JWT-based secure access control, cutting average request resolution time by 40%.
- Created an admin dashboard managing 200+ resident records with real-time status updates, automated notifications, and full input validation.

OSIM - Organizational Simulation System | *C++, OOP* | 2024

- Architected an enterprise-style simulation with 12+ class hierarchies following SOLID principles; persisted 1,000+ records with zero data loss.
- Modeled 5 distinct business entity types with complex inter-class relationships, accurately reflecting real-world corporate structures.

SecureShop | *C++, File I/O* | 2024

- Constructed a secure shopping platform with multi-factor authentication and input-sanitization routines blocking injection-style attacks.
- Utilized secure data-handling practices protecting 50+ simulated user transaction records; delivered modular architecture with $O(\log n)$ search.

Cybersecurity Portfolio | *React, TypeScript, Tailwind CSS* | 2025

- Architected and launched a portfolio website achieving a 95+ Lighthouse score with full mobile responsiveness across all breakpoints.
- Leveraged TypeScript for type-safe coding, eliminating runtime type errors and improving long-term maintainability.

Xonix Game | *C++, Data Structures* | 2024

- Engineered a physics engine maintaining 60 FPS across 5 difficulty levels; incorporated grid-based data structures reducing memory footprint by 35%.

ACHIEVEMENTS AND COMPETITIONS

3rd Place - SudoFuzzers CTF (Forensics and OSINT) | 2025

- Ranked 3rd out of 50+ teams solving digital forensics and OSINT challenges under a 4-hour time constraint, placing in the top 6% of all participants.

7th Place - CyberFest 2025 (National CTF) | 2025

- Secured 7th place in a highly competitive national Capture The Flag event with 100+ competing teams, finishing in the top 7% across forensics, OSINT, and network analysis categories.
