PROFESSIONAL SUMMARY

Cybersecurity student specializing in SOC operations, Digital Forensics and Incident Response (DFIR), and threat detection. Hands-on experience in real-time security monitoring, alert triage, and incident investigation using industry-standard SIEM platforms including Splunk, Wazuh, and Elastic. Proficient in log analysis, endpoint telemetry, IOC identification, and MITRE ATT&CK-mapped; threat hunting. Actively pursuing a SOC Analyst Internship to apply blue-team skills in a professional security operations environment.

EDUCATION

FAST National University of Computer & Emerging Sciences

Islamabad

Bachelor of Science in Cyber Security

2024 – 2028

TECHNICAL SKILLS

Languages: Python, C++, JavaScript, Bash

Security Operations: SOC Operations, Alert Triage, Incident Response, DFIR, Threat Hunting, Security Event Correlation, Playbook Execution, Escalation Procedures, IOC Analysis, Vulnerability Assessment, SOC Tier 1/Tier 2 Support

SIEM & Tools: Splunk, Wazuh, Elastic (ELK Stack), Wireshark, Volatility 3, Autopsy, Belkasoft, Linux, Docker, Git

Forensics: Memory Forensics, Windows Forensics, Network Traffic Analysis (PCAP), Log Analysis, File-Embedded Forensics, Endpoint Telemetry, Artifact Investigation

Frameworks: MITRE ATT&CK; ISO/IEC 27001, Network Security, Digital Forensics

Core Concepts: TCP/IP, Network Protocols, Data Structures, OOP, Secure Coding Practices

EXPERIENCE

SOC Analyst Intern – Tech Hierarchy

1 March 2026 – 31 March 2026

- Triaged and investigated 30+ daily security alerts in Wazuh and Splunk, correlating events against MITRE ATT&CK; TTPs to classify IOCs, reduce false positives, and escalate confirmed incidents per established SOC runbooks and playbooks.
- Performed in-depth analysis of endpoint telemetry, machine behavior, and network logs to detect indicators of compromise (IOCs), support remediation actions, and document findings in incident reports.
- Deployed a personal SOC lab environment using Wazuh and ELK Stack to simulate 5+ attack scenarios including lateral movement, privilege escalation, and credential dumping; validated detection rules and refined alert thresholds to improve threat detection accuracy.

Challenge Author – NASCON 2026 Forensics Arena, FAST NUCES

Islamabad

Feb 2026 – Present

- Designed a hard-category memory forensics challenge simulating a fileless credential dumping attack (MITRE T1003.001), requiring participants to analyze a Windows memory image using Volatility 3 to identify process injection, extract NTLM hashes, and recover plaintext credentials.

Challenge Author & Organizer – RDX National CTF

June 2025 – July 2025

- Designed and deployed challenges covering log analysis, network traffic analysis, suspicious artifact investigation, and file-embedded forensics for a national-level cybersecurity competition; challenges tested participants' blue-team and DFIR skills under time-constrained conditions.

CERTIFICATIONS

- Certified Defensive Security Analyst (CDSA) | Hack The Box (In Progress)
- Security Operations Center (SOC) | Cisco
- Network Security | Cisco
- ISO/IEC 27001:2022 Information Security Associate | Skill Front
- Computer Networks & Network Security | IBM
- Introduction to Cybersecurity Careers | IBM
- Foundations of Business and Entrepreneurship | Skill Front
- Advanced Digital Forensics Techniques | Training Course
- Windows Forensics with Belkasoft | Belkasoft (6 CPE Credits)

PROJECTS

Smart Housing Society Portal | *React, Node.js, MongoDB*

- Built role-based portals for residents, admins, and vendors ensuring secure access control and data privacy.
- Implemented comprehensive complaint handling and facility booking systems with real-time status updates.
- Designed a user management interface to streamline administrative tasks and resident data handling.

OSIM – Organizational Simulation System | C++, OOP Principles

- Developed enterprise-style simulation system demonstrating core OOP principles including inheritance and polymorphism.
- Implemented robust file handling mechanisms for persistent data storage of organizational records.
- Designed complex class hierarchies to accurately model real-world business entities and interactions.

SecureShop | C++, File I/O

- Developed a secure shopping platform architecture focusing on user authentication and input validation.
- Implemented secure data handling practices to prevent unauthorized access to user transaction records.
- Created a modular system design allowing for scalable inventory management and order processing.

Cybersecurity Portfolio | React, TypeScript, Tailwind CSS

- Designed and deployed a professional cybersecurity-themed portfolio website to showcase technical projects.
- Implemented modern UI/UX practices using Tailwind CSS to create a responsive and accessible user interface.
- Integrated TypeScript for type-safe code ensuring application stability and maintainability.

Xonix Game | C++, Data Structures

- Recreated classic arcade game with collision detection and progressive difficulty.
- Implemented efficient grid-based data structures for tracking game state and player movement.
- Developed game physics engine with real-time rendering and interactive gameplay mechanics.

ACHIEVEMENTS & COMPETITIONS

3rd Place – SudoFuzzers CTF (Forensics & OSINT)	2025
• Secured 3rd position by solving complex digital forensics and Open Source Intelligence challenges.	
7th Place – CyberFest 2025	2025
• Achieved top-tier ranking in a highly competitive national Capture The Flag event.
